Cloud-Based Mobility Solutions

Stay Connected On-Site or Off-Site

Mobility is essential to staying connected to your customers and your team; it enables you to be as productive away from your desk as when you are at your desk. Toshiba's robust mobility solutions enable users to access internal extensions, external lines and voice mail from anywhere on campus or at remote locations that have coverage.

Cost-Effective Solutions

Toshiba wireless local area network (WLAN) mobility solutions maximize value by using your existing WLAN infrastructure. Toshiba's VIPedge® cloud-based telephone solution integrates with a variety of voice communication features over your IP network, allowing you to extend full telephone mobile functionality to local and remote users. Go anywhere and do anything within your facility and off-site—while staying connected to your communication and messaging system.

Unified Communications

Toshiba's powerful Call Manager application lets you combine the capabilities of your computer and Toshiba telephone into one powerful communication tool. Use your mouse to dial, answer, transfer calls, and more—without ever picking up the phone's handset.

CRM integration provides screen pops with programs such as Salesforce.com, Act!®, Microsoft® Outlook™ and more. Use your PC for Chat instant messaging, broadcasting messages to multiple users, and simultaneous Chat sessions. Presence capabilities let users see the current status of co-workers, quickly transmit important information, and best serve customers through an easy and intuitive unified communications interface.

IP User Mobility

IP User Mobility is a suite of features included in Toshiba's VIPedge™ cloud-based telephone solution. The application enhances the flexibility and mobility of your Toshiba IP telephone or SoftIPT® softphone. IP User Mobility consists of three major features that allow users to be more mobile.

- Log off and log into any Toshiba IP telephone (or SoftIPT) without having to make any configuration changes. Similar to "hot desking," it allows you to use your corporate directory number (DN) to log in. Then use the extension as if it were your own, including the button programming
- Using Toshiba's eManager/Enterprise Manager, the Administrator can create and build more IP stations than there are physical IP endpoints, resulting in substantial savings when your telecommunications needs grow

IP User Mobility also allows your phone to login to a second system if your first system is unreachable improving the continuity of service under adverse situations.

Additional benefits include the ability for multiple users to share one Toshiba IP telephone or one SoftIPT, better security with per-directory number password programming, and IPT mobility even works across nodes in multi-node environments.

Follow Me (Twinning)

VIPedge Messaging's Follow Me feature enables a single phone number to reach a user's chosen devices, e.g., desk phone, mobile phone, or both simultaneously.

Toshiba Wireless SIP DECT Telephones

Toshiba's IP4100, built on proven DECT 6.0 secure technology, provides a cost effective in-building wireless solution. This complete in-building mobility solution supports growth flexibility up to 200 handsets and 40 access points. It provides seamless roaming with a multi-base configuration. A 2-inch color TFT back-lit display, colored LED status indication, and high-quality speaker phone provide ease of use.

Call Manager Mobile—Coming Soon

Toshiba's Call Manager Mobile application enables a supported Android smartphone to act as an extension of the office desk phone and offers the following features:

- Outbound calling through the host VIPedge system allows you to make business calls from your smartphone using your business caller ID, while keeping your cell phone number private
- Instant messaging with other Call Manager and Call Manager mobile users including broadcast and group chat features
- Presence which shows when a user is on the phone or on vacation
- Working with the Find-Me Follow-Me feature you can receive calls made to your desk phone, on your cell phone

SPECIFICATIONS
